VoIP

Auto Answer Paging Calls on Digium Phones with FreePBX EPM

By default Digium phones and newer FreePBX versions mated together will ring and then intercom for intercom and paging calls (alert info ring-answer which is the default). You can force the Digiums to auto answer a page or intercom call without the leading ring using the following cli commands to modify the paging piece of the database.

```
fwconsole mysql m
update paging_autoanswer set setting='intercom' where useragent='Digium'
quit
fwconsole reload
```
