FreePBX Update Script

We run this script manually monthly on all of our FreePBX installs. It performs the following actions, in order:

- Fix FreePBX permissions and ownership (chown)
- Refreshes the signatures
- Upgrades all modules
- Reloads FreePBX
- Refresh the signatures again
- Fix FreePBX permissions and ownership (chown) again
- Update the OS (optional)

Script is below. We typically put it in the root, name it "pbxupdate" and chmod +x it to make it executable.

```
fwconsole chown
fwconsole ma refreshsignatures
fwconsole ma upgradeall
fwconsole reload
fwconsole ma refreshsignatures
fwconsole chown
read -p "Press [Enter] to update OS, or [Ctrl] + [Break] to exit."
yum update -y
```
